

PRESS RELEASE

June 5th 2007

New low-cost sealed Primalec Concertina injector system.

- environmentally friendly bellows cartridge injects fluids cleanly into pressurized or un-pressurized systems with no hassle, no waste, no leakage.

This picture is digital file 'Concertina GU007'. For the file, email ivor@matanle.co.uk

Primalec has launched an innovative new low-cost injector for closed systems, based on a concertina-style flexible cartridge incorporating a non-return valve (worldwide patents applied for). The cartridge is normally used in a totally new torque injector tool which applies precisely controlled pressure to the concertina cartridge when the screw is turned but can also be used simply by squeezing it with the hand if fluid is being injected against little or no system pressure. The Concertina Injector makes it possible to inject precisely measured amounts without first de-pressurizing the system.
